Dependencies

Add Spring Boot Starters and dependencies to your application

Search for dependencies

Selected Dependencies

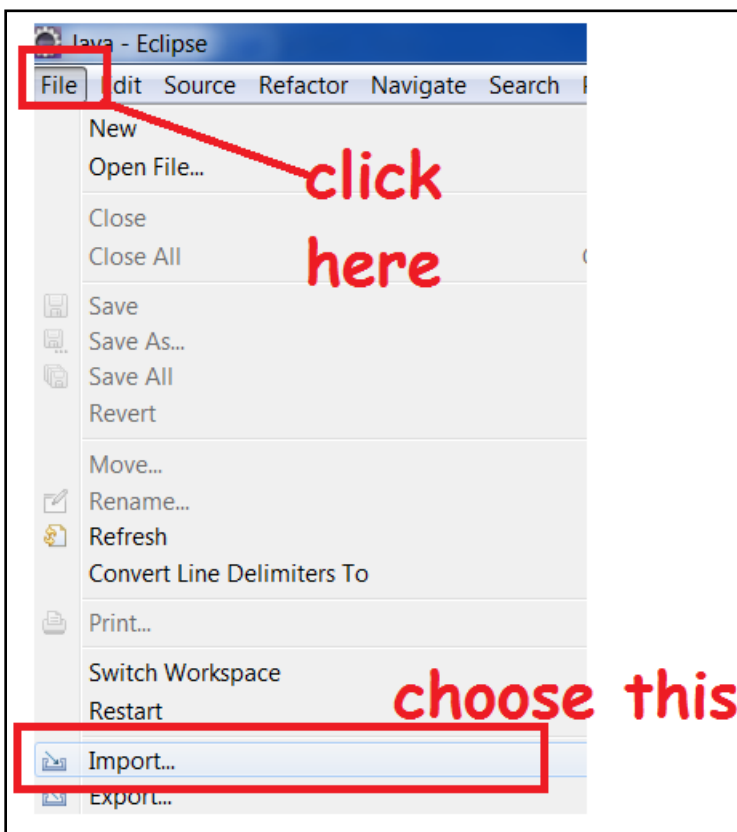

➤ It will download one ZIP File ex:"demo.zip"

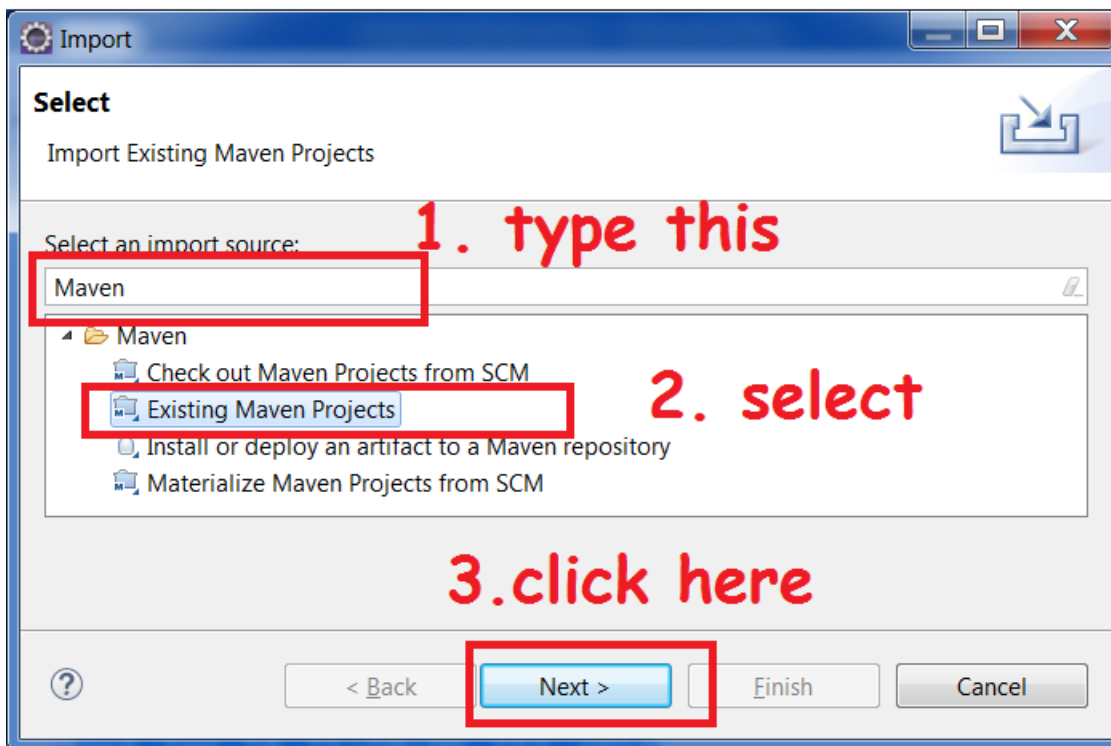

- Extract this ZIP into one folder

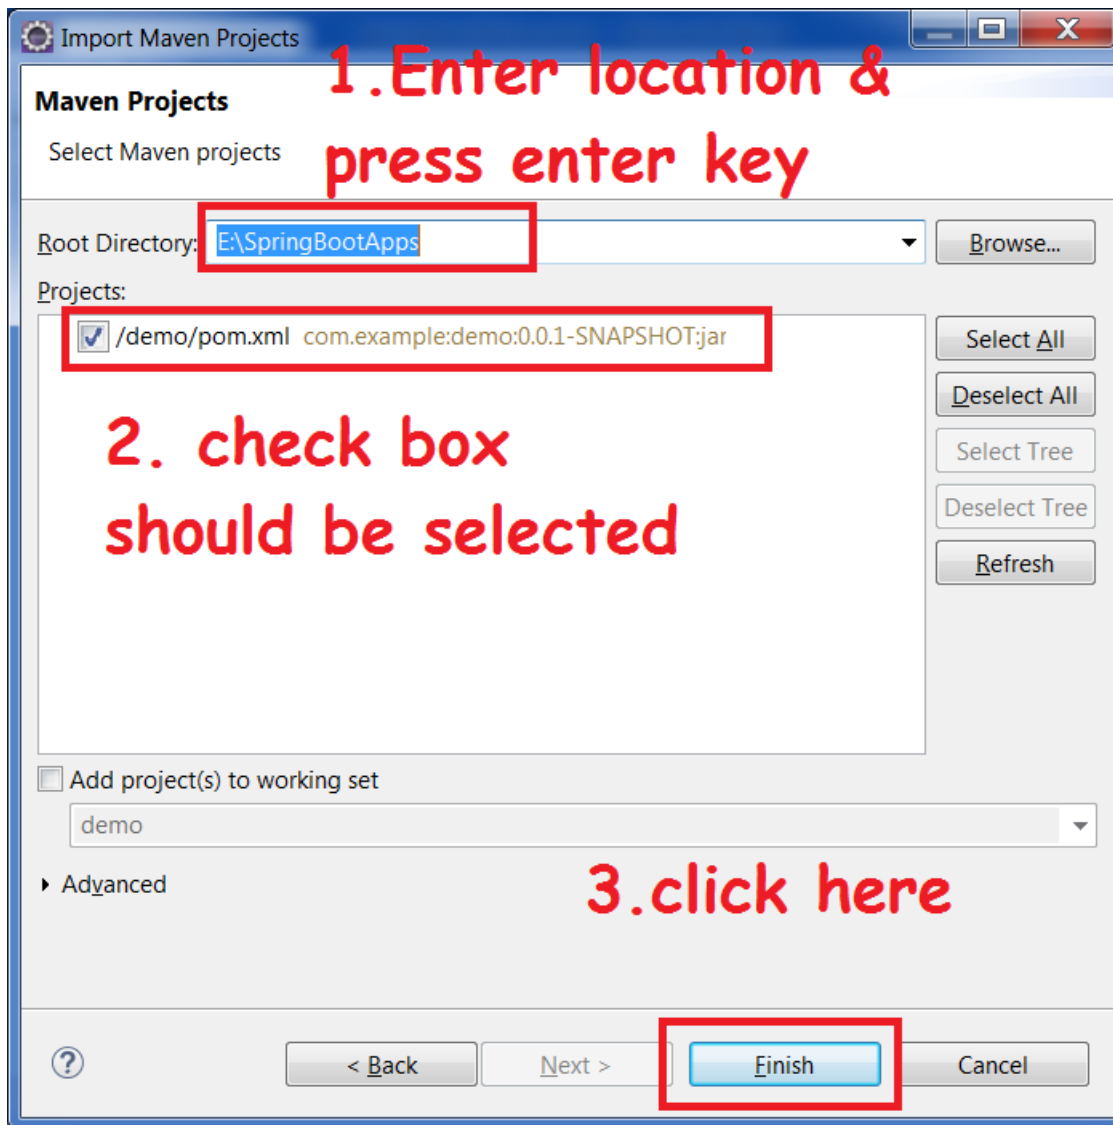

- Open Eclipse Now
- Go to File menu , here choose "Import" option.

- One new window will appear, there enter "Maven" in search screen and select "Existing Maven Project"

- Click on Next button, in next stage Enter Root Directory details , i.e. where your project is downloaded (folder location of your project)

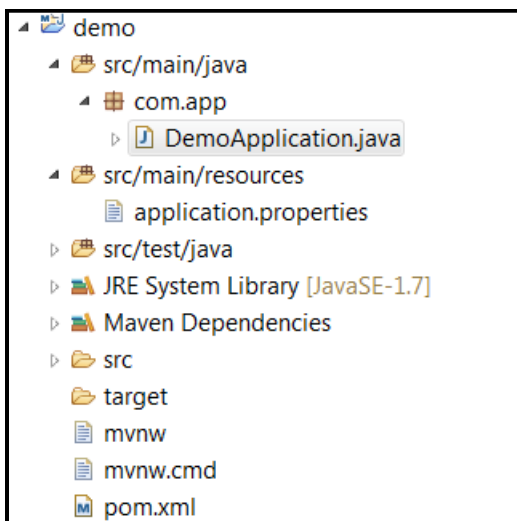

- Now It takes some time to download Jars and to do other setup wait for few minutes.. (internet connection is required for all this setup for first time).

Note: For application.properties details link is:

<https://docs.spring.io/spring-boot/docs/current/reference/html/common-application-properties.html>

Folder Structure:

1.pom.xml

```
<?xml version="1.0" encoding="UTF-8"?>
<project xmlns="http://maven.apache.org/POM/4.0.0"

2.application.properties

```
logging.level.com.app=OFF
logging.level.org.springframework=OFF
```

3.Spring Boot Starter Class

```
package com.app;

import org.springframework.boot.Banner;
import org.springframework.boot.CommandLineRunner;
import org.springframework.boot.SpringApplication;
```

```
import org.springframework.boot.autoconfigure.SpringBootApplication;

@SpringBootApplication
public class DemoApplication implements CommandLineRunner{

    public static void main(String[] args) {
        //SpringApplication.run(DemoApplication.class, args);
        SpringApplication app=new SpringApplication(DemoApplication.class);
        app.setBannerMode(Banner.Mode.OFF);
        app.run(args);
    }
    @Override
    public void run(String... args) throws Exception {
        System.out.println("Hello");
        System.exit(0);
    }
}
```

Run as Main method for Output:(Ctrl+F11)

Hello
